Skills

Electronics and maintenance

Electronic device maintenance and troubleshooting
IT equipment maintenance
Embedded systems
Local networks

Programming

C++, Java, Python, PHP

Databases

MySQL

Software

Microsoft Office (Word, PowerPoint)
Multimedia devices and software

Soft skills

Teamwork

Languages

Arabic
Native

English
B1, intermediate

French
A1, beginner

Professional summary

Embedded Systems Electronics Engineer (2024 graduate) with hands-on experience in electronic and IT equipment maintenance, exposure to industrial measurement and control systems at SONATRACH, and two award-winning projects in remote and solar-powered pump control. Proficient in C++, Python, Java, PHP and MySQL. Seeking to contribute to embedded systems development and advanced electronics integration in an innovation-driven organization.

Education

Université Kasdi Merbah Ouargla — 2024

Engineer's Degree in Embedded Systems Electronics

Field: Science and Technology | Specialization: Electronics | GPA 12.03/20

Projects

Solar-Powered Water Pump Control — May 2023

- Extended the remote-control design with solar power, so the pump runs on solar energy and is controlled remotely by phone call over long distances.

First place, university annual event

Remote Water Pump Control — May 2022

- Developed a system to control water pumps remotely over long distances by phone call, removing the need to travel to the site.

Second place, university annual event

Internships and training

SONATRACH, Haoud Berkaoui, Ouargla — April 2024

Industrial training: electronic systems and devices maintenance (1 week)

- Completed field training on industrial safety and the full production chain: production, refining and export.
- Studied the equipment and the maintenance of measuring instruments across the plant and wells.
- Learned how production is monitored and controlled from the central control room, including signaling and IT systems.

Air Algérie, Ouargla Regional Direction — July 2021

Internship: device and signal maintenance (2 weeks)

- Maintained and tested electronic systems and IT equipment, carrying out routine maintenance and technical updates.
- Diagnosed component failures and worked with embedded systems and local networks.
