

Salah Eddine Benettouati

+213 553 69 94 73 | Illizi, Algeria | benettouati.salah.eddin@gmail.com | github.com/salah-eddine-program | linkedin.com/in/salah-eddin-benettouati-98a101310 | salah-eddine-program.github.io/bt-salahdine.com

Professional Summary

Embedded Systems Electronics Engineer with practical experience in electronic equipment maintenance, fault diagnosis, and remote water-pump control projects. Skilled in Arduino, C++, GSM, circuit design, and troubleshooting. Experience includes technical maintenance work and field training with Algerian Airlines and Sonatrach. Award-winning university project contributor, with first-place recognition in 2023 and second-place recognition in 2022.

Technical Skills

- **Embedded Systems:** Arduino, GSM modules, remote-control systems, microcontrollers
- **Electronics:** Equipment maintenance and repair, fault diagnosis, testing, signalling systems, circuit design and simulation
- **Programming:** C++, Java, Python, PHP, MySQL
- **Tools:** Arduino IDE, Proteus, Multisim, Circuit Wizard, Virtual Breadboard
- **Additional:** IT equipment maintenance, local area networks (LAN), teamwork

Work Experience

Field Training - Electronic Systems and Instrumentation Maintenance
SONATRACH - Haoud Berkaoui

Apr 14-21, 2024
Ouargla, Algeria

- Completed field training covering plant safety and operations from production and refining through export.
- Gained practical exposure to instrumentation maintenance at the plant and wells, and to production monitoring from the central control room.
- Became familiar with the signalling and IT systems used in plant operations.

Electronic Equipment and Signalling Maintenance
Air Algerie - Regional Directorate, Ouargla

Jul 15-29, 2021
Ouargla, Algeria

- Maintained and tested electronic systems and IT equipment; diagnosed component-level faults.
- Worked with embedded systems and local area networks; supported routine maintenance and technical updates.

Education

Kasdi Merbah University of Ouargla
Engineer in Embedded Systems Electronics

Ouargla, Algeria
2024

- Specialization: Electronics | Field: Science and Technology

Selected Projects

Solar Water Pump Control System

May 2023

- Integrated solar power into a remote water-pump control system while retaining phone-call control.
- Awarded first place at the university's annual technical project event in 2023.

Remote Water Pump Control System

May 2022

- Developed a system for controlling water pumps remotely by phone, without requiring travel to the site.
- Awarded second place at the university's annual technical project event in 2022.
